I'm a cybersecurity enthusiast with a strong interest in cloud security, driven by real experiences that taught me the importance of protecting personal data. My journey began when I was repeatedly hacked as a teenager on social media, which sparked a deep curiosity about how attackers operate— and how to stop them.

Since then, I've been committed to learning how to secure digital systems, with a growing focus on cloud infrastructure. I value protecting people and their data, and I aim to help organizations build systems that are secure by design, not just by reaction.

With a foundation in computer engineering, a passion for networks, and inspiration from my father's work in SAP cloud systems, I'm now focused on becoming a cloud security engineer who can make the internet a safer place for everyone.
